EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with E. Michael Byorick, Reg. No. 34,131 on 27 March 2008.

It is noted that the amendment was to clarify that the system is a hardware (i.e., a machine) based system.

The application has been amended as follows (Note: Only amended claims listed below):

1. A system, including a processor, for linking a plurality of indices with related target text associated with each of the subjects comprising the steps of:

generating a global index file comprising said subjects and a corresponding address of the text associated therewith;

generating a data structure indicative of a correspondence between said indices and associated said subjects;

generating a subject name file comprising HTML-encoded target text associated therewith, for each of the subjects;

generating, for each of the indices, a first set of hyperlinks wherein each of the hyperlinks therein links one of the indices to the target text corresponding to one of the subjects in one of the indices;

generating a second set of hyperlinks wherein each of the hyperlinks therein links one of the subjects to the text corresponding thereto in the subject name file;

copying the first set of hyperlinks, the second set of hyperlinks, and the HTML-encoded target text to a web site; and

updating, on a web site, the hyperlinks necessary to link a web page on the web site to a new version of the document containing the HTML-encoded target text.

9. A system, including a processor, for generating hyperlinks between a plurality of indices and associated text on a web site comprising the steps of:

creating a category file indicating an association between each of the indices and corresponding subject names;

generating a data structure associating said indices and said corresponding subject names in accordance with said category file;

generating a plurality of subject name files, each including text corresponding to a subject associated therewith;

generating a global index file comprising said hyperlinks to each of said subject name files;

generating a plurality of index files, each including hyperlinks between each of the indices and corresponding said subject name files in accordance with said data structure;

displaying, in a first window, in accordance with said index files, a list of category names corresponding to said indices;

displaying, in a second window, a set of sub-indices comprising a list of subject names corresponding to a selected instance of said category names, in accordance with said index files, in response to a user selecting one of said category names;

displaying, in a third window, said text in said subject name file corresponding to a selected one of said subject names, using said hyperlinks in said global index file, in response to a user selecting one of said subject names in the second window;

copying all of said hyperlinks, and said text in said subject name file, to the web site; and

updating, on the web site, the hyperlinks necessary to link a web page on the web site to a new version of said associated text.

16. A system, including a processor, for linking, on a web page, a plurality of system commands, categories thereof, and associated text, the system comprising the steps of:

generating a global index file comprising said commands and a corresponding address of the text associated therewith;

generating a data structure indicative of a correspondence between said categories and associated said commands;

generating a command name file comprising HTML-encoded text associated therewith, for each of the commands;

generating, for each of the categories, a first set of hyperlinks wherein each of the hyperlinks therein links one of the categories to the target text corresponding to one of the commands in one of the categories;

generating a second set of hyperlinks wherein each of the hyperlinks therein links one of the commands to the text corresponding thereto in the command name file;

copying the first set of hyperlinks, the second set of hyperlinks, and the HTML-encoded target text to a web site displaying the web page; and

updating, on the web site, the hyperlinks necessary to link the web page to a new version of the document containing the HTML-encoded target text.
